CONTROVERSIES IN TRAUMA SURGERY

practise with enthusiasm

Controversies in trauma surgery – The Expert Forum is a unique opportunity for participants to discuss their clinical problems and experiences with an expert international faculty.

The course will use a new educational format based around discussion of specially selected clinical cases. These cases have been prepared focussing on five problematic clinical areas where patient management is controversial. Participants will discuss these cases in moderated small group discussion groups and will be asked to present their own conclusions on the management of the cases. The session on each topic ends with a lecture on the state of the art in the treatment of these conditions. All views put forward by the expert will be evidence based. The topics selected are – pilon fractures, Complex tibial plateau fractures, fractures of the proximal humeral, Non-union and Polytrauma.

The course is suitable for surgeons with some experience of treating these injuries who are willing to share their problems with an international faculty in a friendly, supportive environment.
